My story …

I've always aspired to make a meaningful impact in the world through a specific set of skills I've committed myself to perfecting.
During my school years, I immersed myself in the music industry, ambitiously building my own musical empire. Despite recording and co-producing songs, creating a music video, and publishing an album, I realized the industry's limitations. Recognizing the need for a more sustainable career, I transitioned to the finance and insurance sector at my father's dealership.

Initially joining the sales team, I worked diligently to meet the qualifications for becoming a 'fit and proper' financial advisor. Later, when my father expanded to open an aftersales department, I spearheaded its establishment from the ground up. Serving as Aftersales Manager for approximately five years, I aimed to transform the workshop and parts department into the premier service provider in Gauteng. However, challenges emerged as the dynamics of working with family proved complex. Dissatisfied with a stagnant role and seeking professional growth, I discovered my passion for programming as an avenue for building my own future.

My passion for programming …

I love that every program has its own set of challenges that need to be solved like a puzzle, and I absolutely love knowing that if something in the code doesn't work, it's on me – I control my own work.
I'm in love with the idea that the possibilities in changing the world with my code are endless; there are so many opportunities to make a difference in the world through programming.
It's a whole new world for me, and it's exciting!

My future goals …

I'm currently working towards a Bachelor of Science in IT (Software Engineering), and in the long term I am striving to become one of the most skilled software developers in the industry.
Artificial Intelligence and Machine Learning has definitely sparked an interest within me, and I hope to specialize in a field where AI software can work hand-in-hand with the mechanical engineering aspects of technology.

> I think of myself as a hard, diligent worker. I pride myself in the fact that I take my job very seriously – whatever it may be – and that I am not satisfied until something is 200% right. A perfectionist to a certain extent.
>
> I consider myself to be a very responsible person – a trait I was taught from a young age – and based on experience I have proven to be very work orientated.

Full Names: Cherié Christie Smal
ID Number: 950525 0020 087

Employment

Aftersales Manager
Mahindra Benoni Dealership and Service Centre
2019 – present

Responsibilities:
- When I started working for this Company, the owner had decided to start the Aftersales Department.

  I took on the task of setting everything up and communicating with Mahindra South Africa to arrange everything from scratch in order to open the Aftersales department for the Company.
  This included, but was not limited to:
  - ✓ The designing and creation of the Aftersales management system (for invoicing, job creating, bill capturing, internal orders etc.)
  - ✓ After sales staff recruitment and training.
  - ✓ Creating a business strategy.
- Furthermore, I am responsible for managing the development and the operations in the Aftersales department for the
